LLM

Language Model (LM)

Types of LM: Representation Model and Generic Model

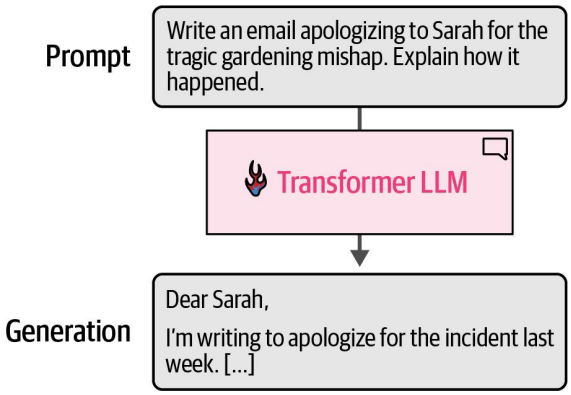

A Recent History of Language AI

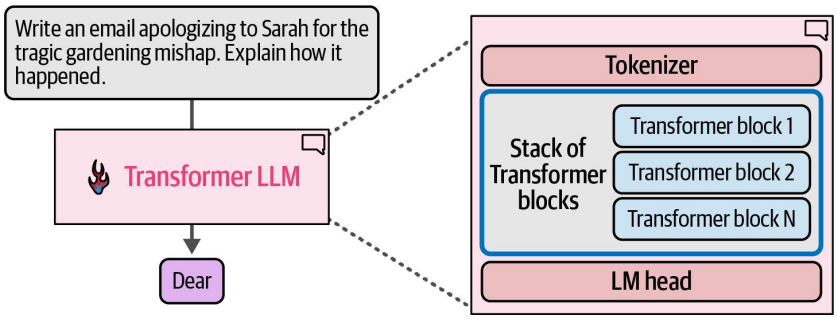

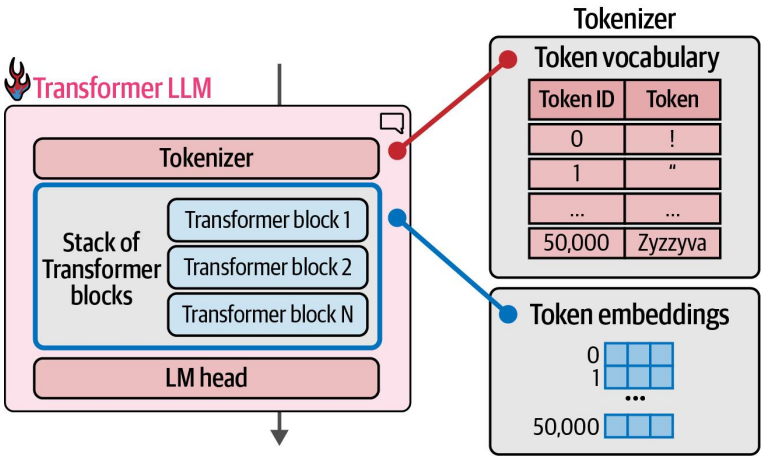

Difference between Transformer and Non-transformer Model

Types of Transformer Model: Encoder, decoder and Encoder-Decoder

Transformer LLM Model

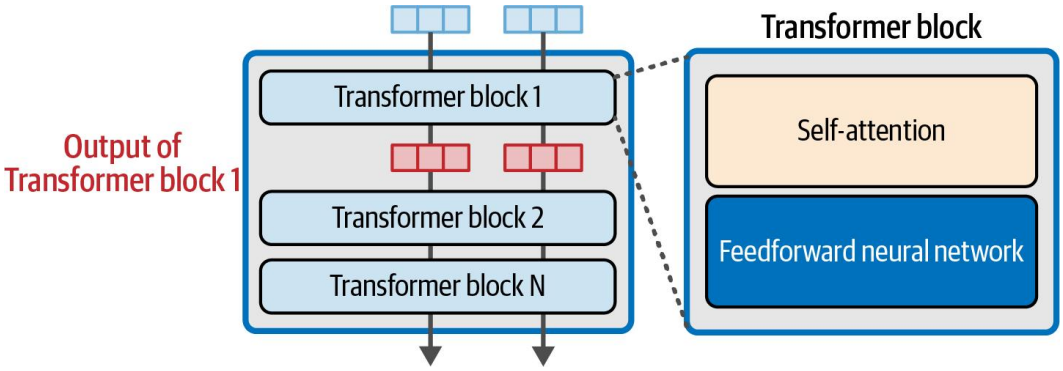

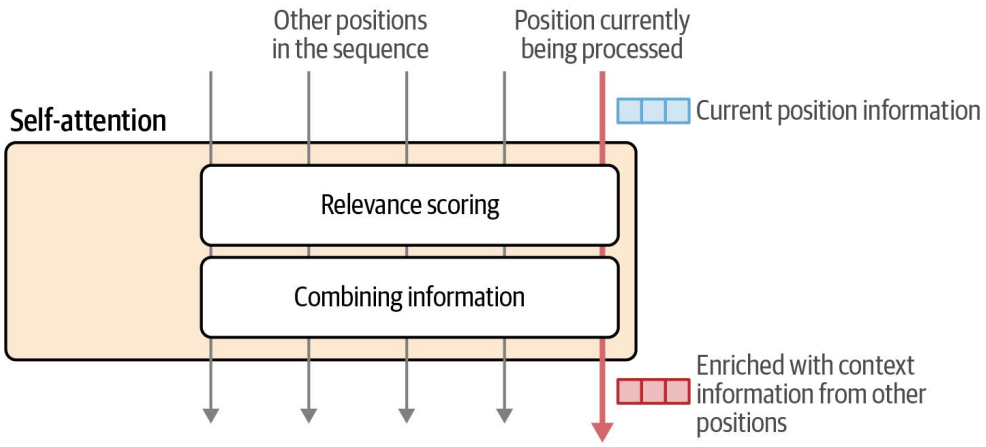

Components of A Transformer block

1. *The attention layer* is mainly concerned with incorporating relevant information from other input tokens and positions
2. *The feedforward layer* houses the majority of the model's processing capacity

Two main steps are involved in the attention mechanism:
1. A way to score how relevant each of the previous input tokens are to the current token being processed (in the pink arrow).
2. Using those scores, we combine the information from the various positions into a single output vector.

Example of attention calculation (using single head)
